

The webinar, “**Enriching the CLSA with environmental exposure data: The Canadian Urban Health Research Consortium (CANUE)**,” will begin shortly.

For first-time WebEx users:

- This webinar will use VoIP only. Upon entering the session, you will be asked to join an integrated voice conference. Please select "yes". If you are not prompted with this message, please go to the main toolbar and select Audio>Integrated Audio Conference>Start Conference. If you continue to have audio issues, please go to Audio>Speaker/Microphone Audio Test.
- The only people in the session who can speak and be heard are the host and panelists.
- If you have questions/comments, you can type them into the chat box in the bottom right of the WebEx window. Ensure “All Participants” is selected from the dropdown menu before you press “send.” Mobile users must select “Chat with Everyone.” Questions will be visible to all attendees. You can type your questions at any point during the session, but they won’t be answered until the end of the presentation.
- At the conclusion of the webinar, please consider participating in our feedback poll and remember to exit the WebEx session.

CLSA Webinar Series

Enriching the CLSA with environmental exposure data: The Canadian Urban Health Research Consortium (CANUE)

Dr. Jeffrey Brook, Dr. Eleanor Setton and Dany Doiron

Noon to 1 p.m. ET | October 23, 2018

The Canadian Urban Environmental Health Research Consortium (CANUE) is a CIHR-funded initiative, which collates and develops standardized urban environmental exposure data and links them to health databases to support environmental health research in Canada. CLSA and CANUE have collaborated to link data on air quality, neighbourhood factors, weather and climate, and greenness indicators to CLSA data on health and aging. The linked data, now available to Canadian researchers, includes estimated exposures of sulfur dioxide, nitrogen dioxide, ozone and fine particulate matter, as well as information about nighttime light, normalized difference vegetation index (i.e. greenness), health-relevant climate and weather measures, material and social deprivation indices and the Canadian Active Living Environments (i.e. walkability) index. This webinar will give an overview of CANUE and of pre-linked environmental exposure data currently available to researchers through the CLSA. The webinar will also touch on methods for expanding the breadth and quality of environmental exposures available to the CLSA and other Canadian cohorts.

In collaborating with the CLSA, CANUE ultimately aims to enable research on how environmental factors affect the ways in which Canadians age and help better inform evidence-based strategies for planning healthy and age-friendly communities and cities across Canada.

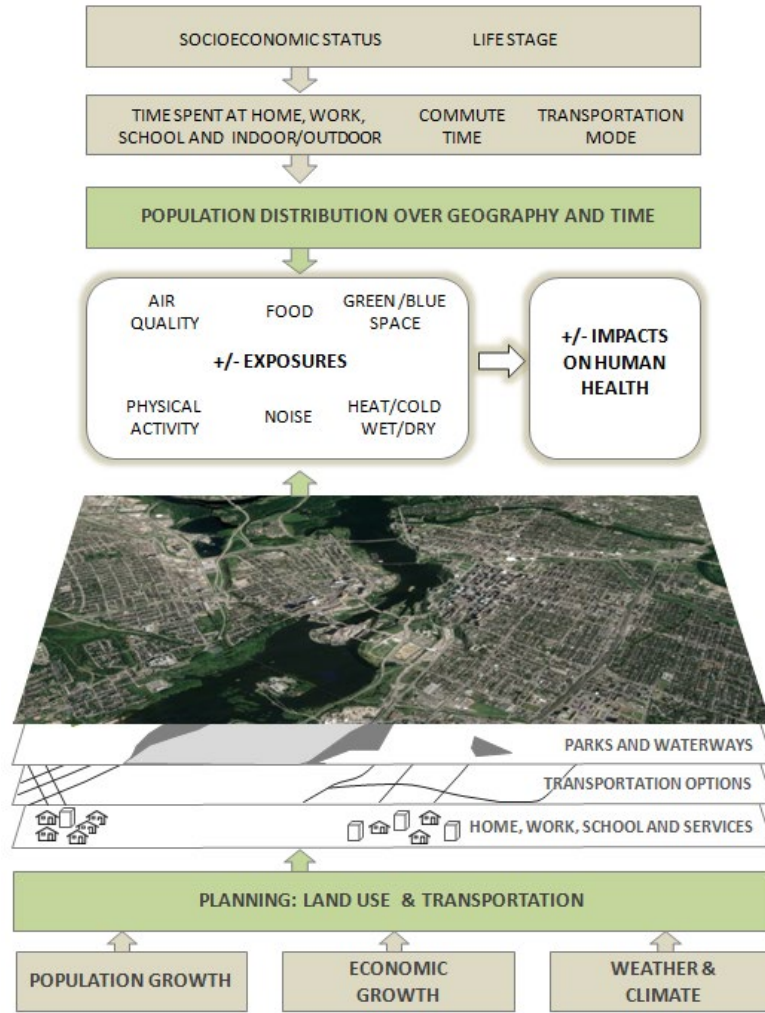

Enriching the CLSA with environmental exposure data: the Canadian Urban Environmental Health Research Consortium

OCTOBER 23 | 2018

A B S T R A C T

Objective: Determine the risk of premature mortality due to the urban ambient air pollution mix in Canada.

Methods: The number of daily deaths for non-accidental causes were obtained in 11 cities from 1980 to 1991 and linked to concentrations of ambient gaseous air pollutants

The Effect of the Urban Ambient Air Pollution Mix on Daily Mortality Rates in 11 Canadian Cities

Neighbourhood factors

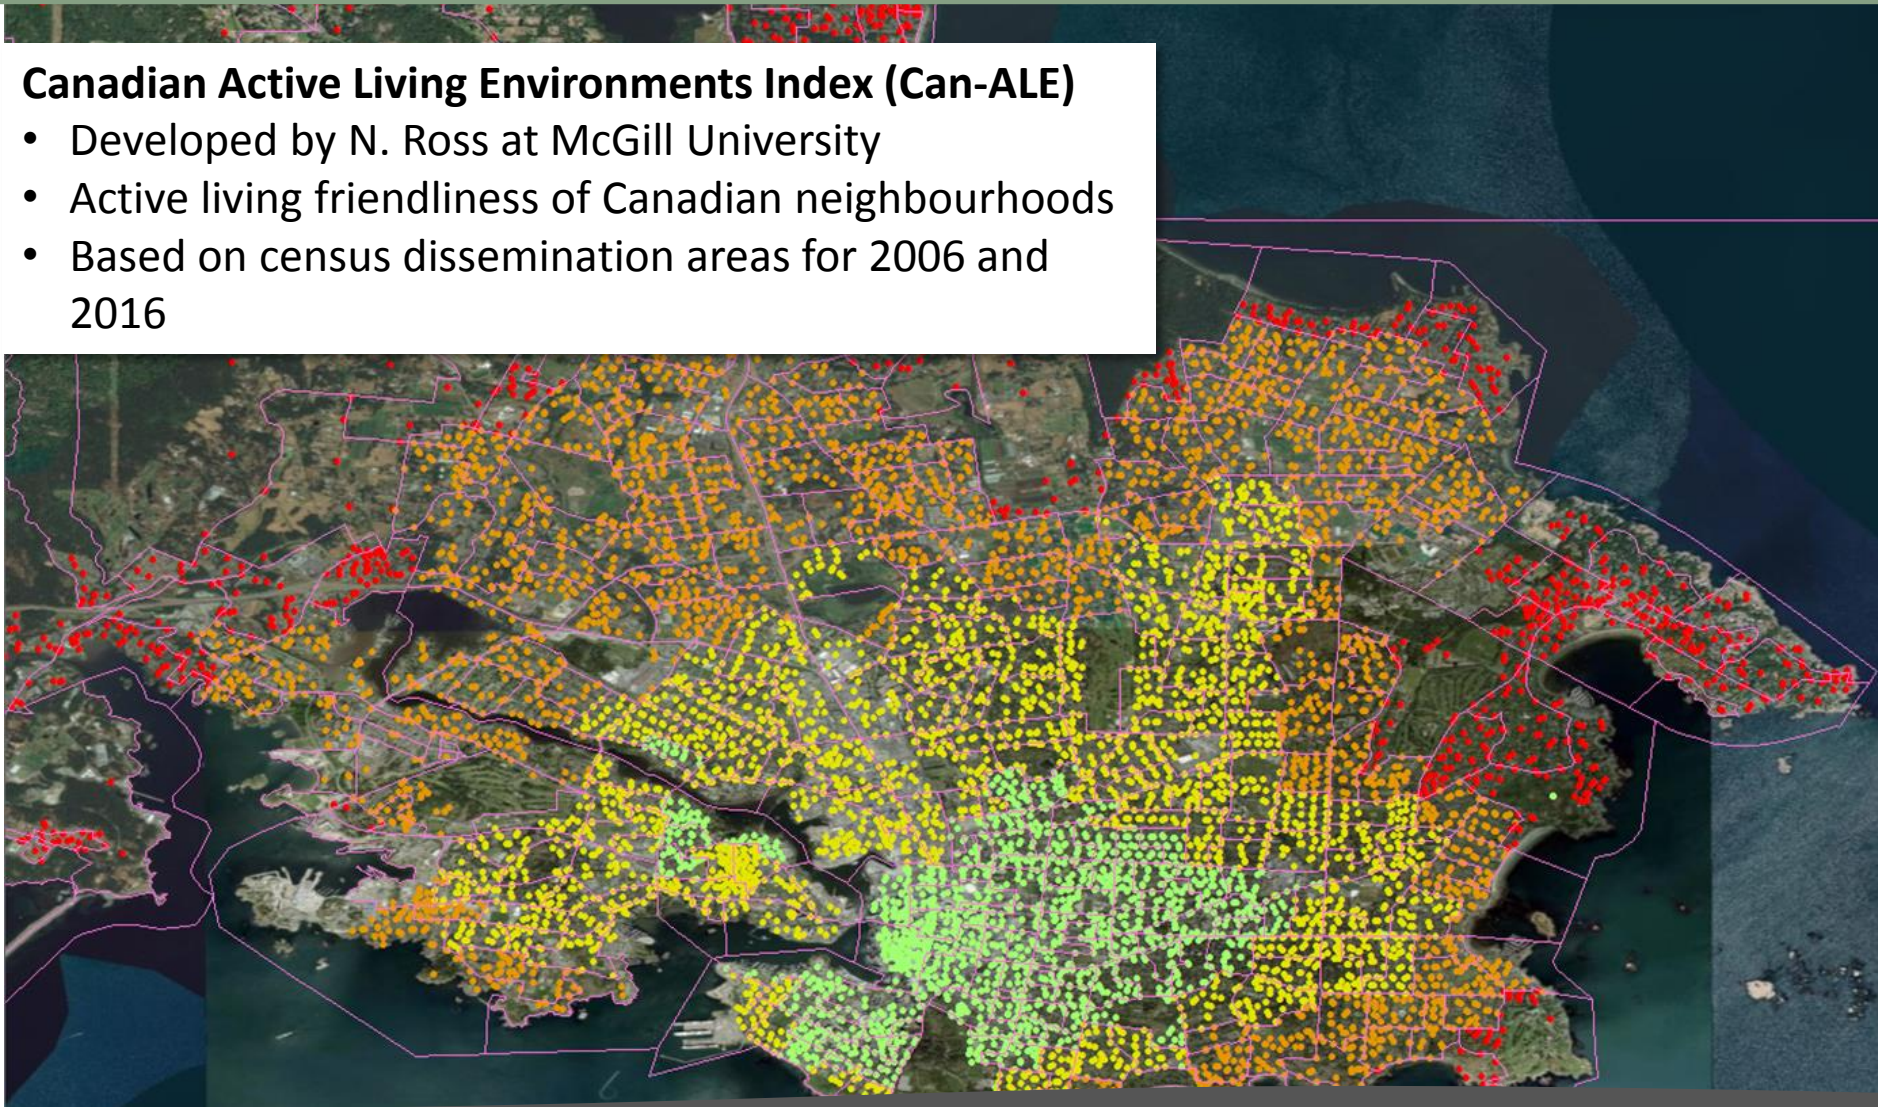

Material and Social Deprivation Index

- Developed by R. Pampalon for INSPQ
- Based on census dissemination areas for 2011

Canadian Active Living Environments Index (Can-ALE)

- Developed by N. Ross at McGill University
- Active living friendliness of Canadian neighbourhoods
- Based on census dissemination areas for 2006 and 2016

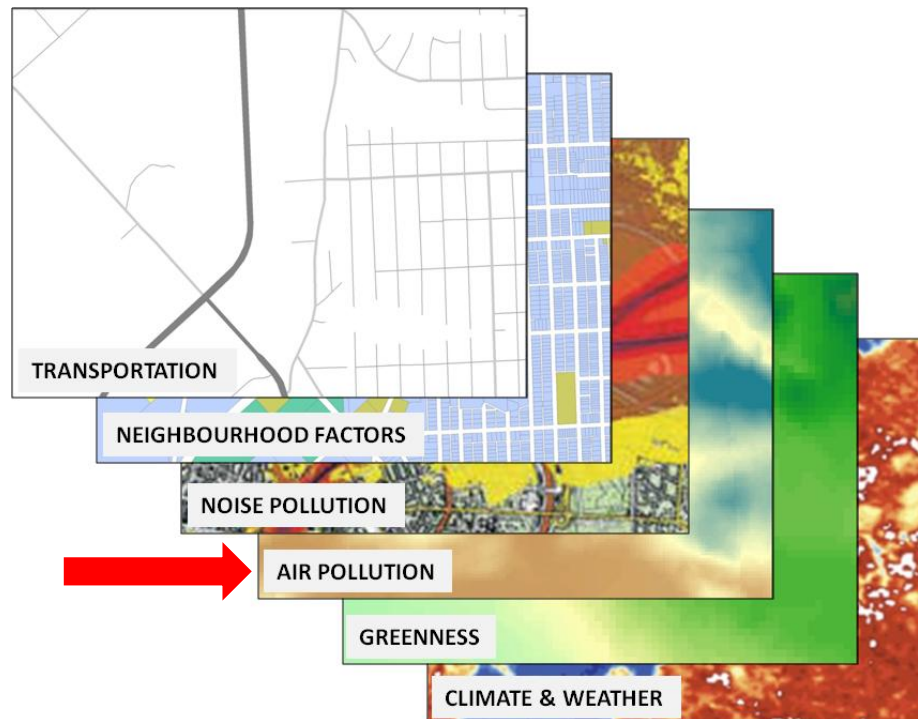

Nighttime light

- Satellite imagery
- Annual average brightness
- 1 km resolution

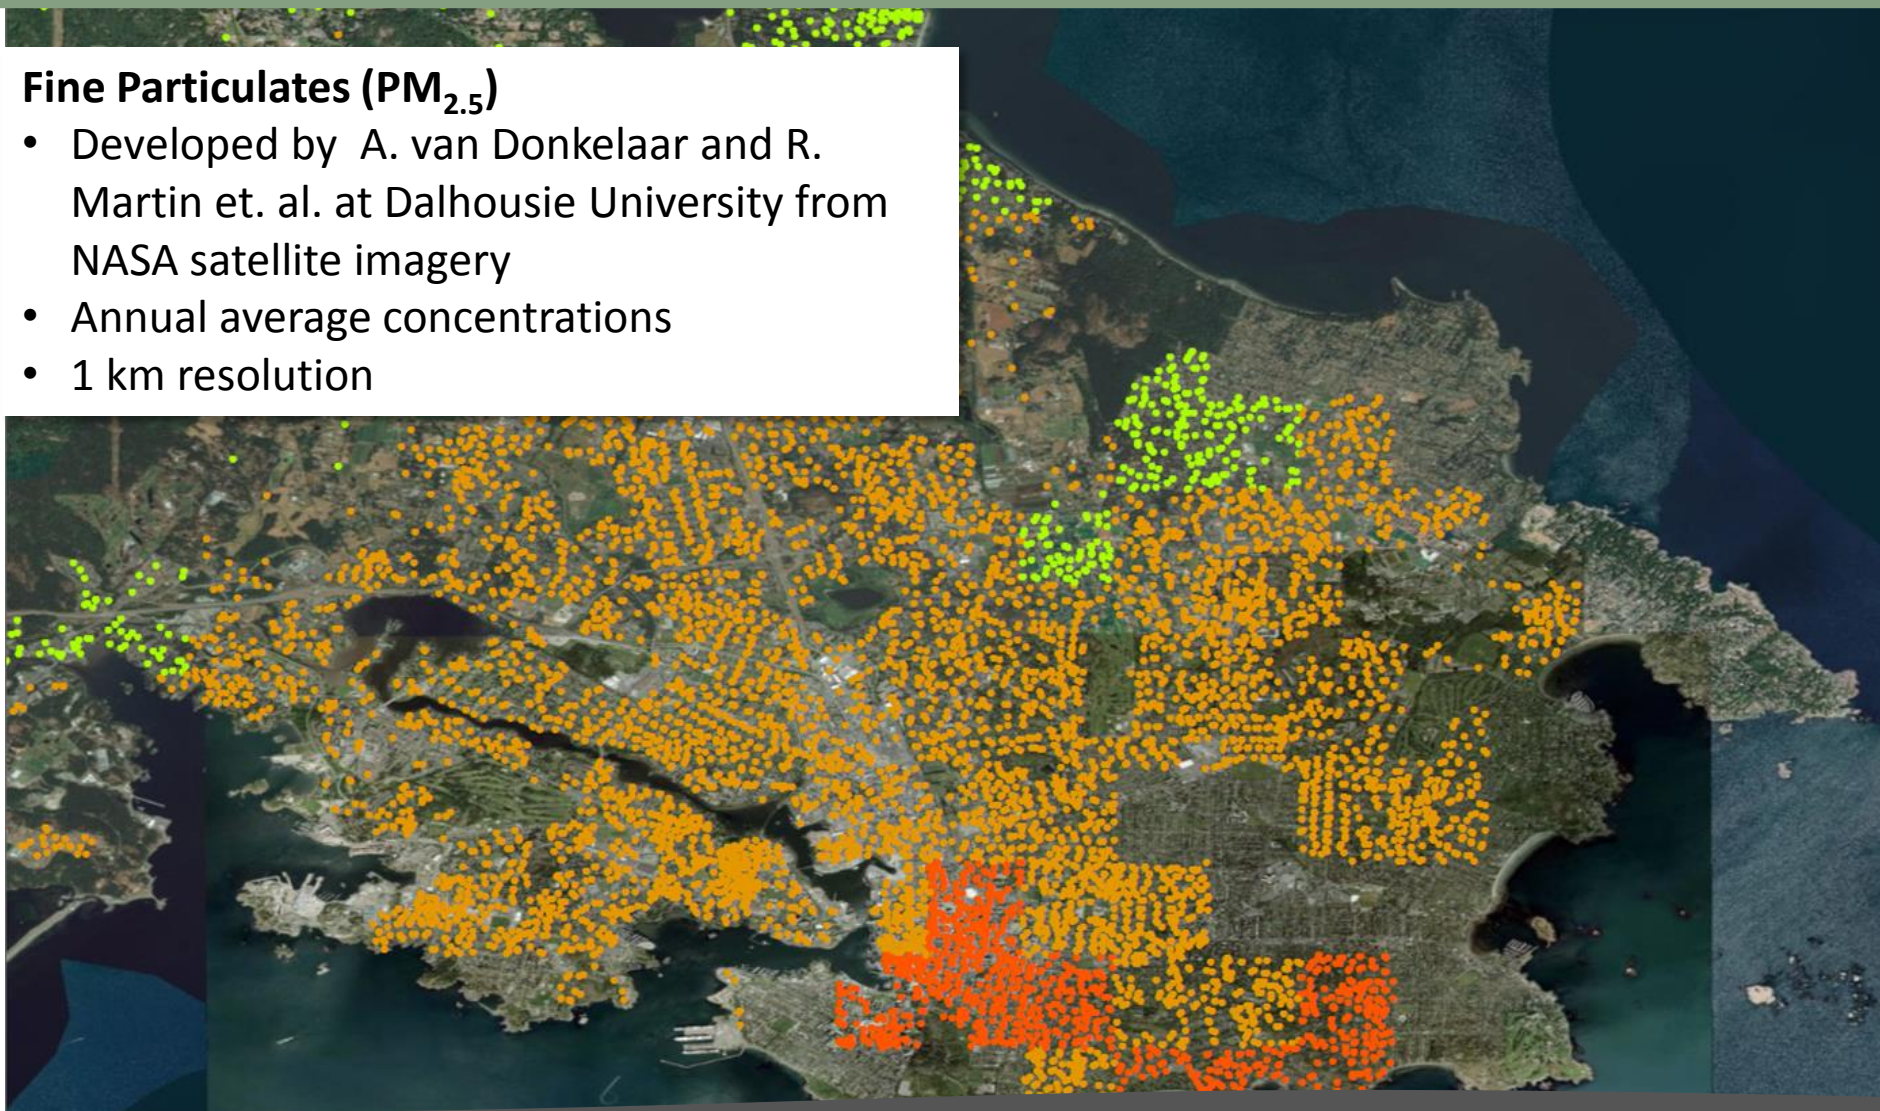

Air pollution

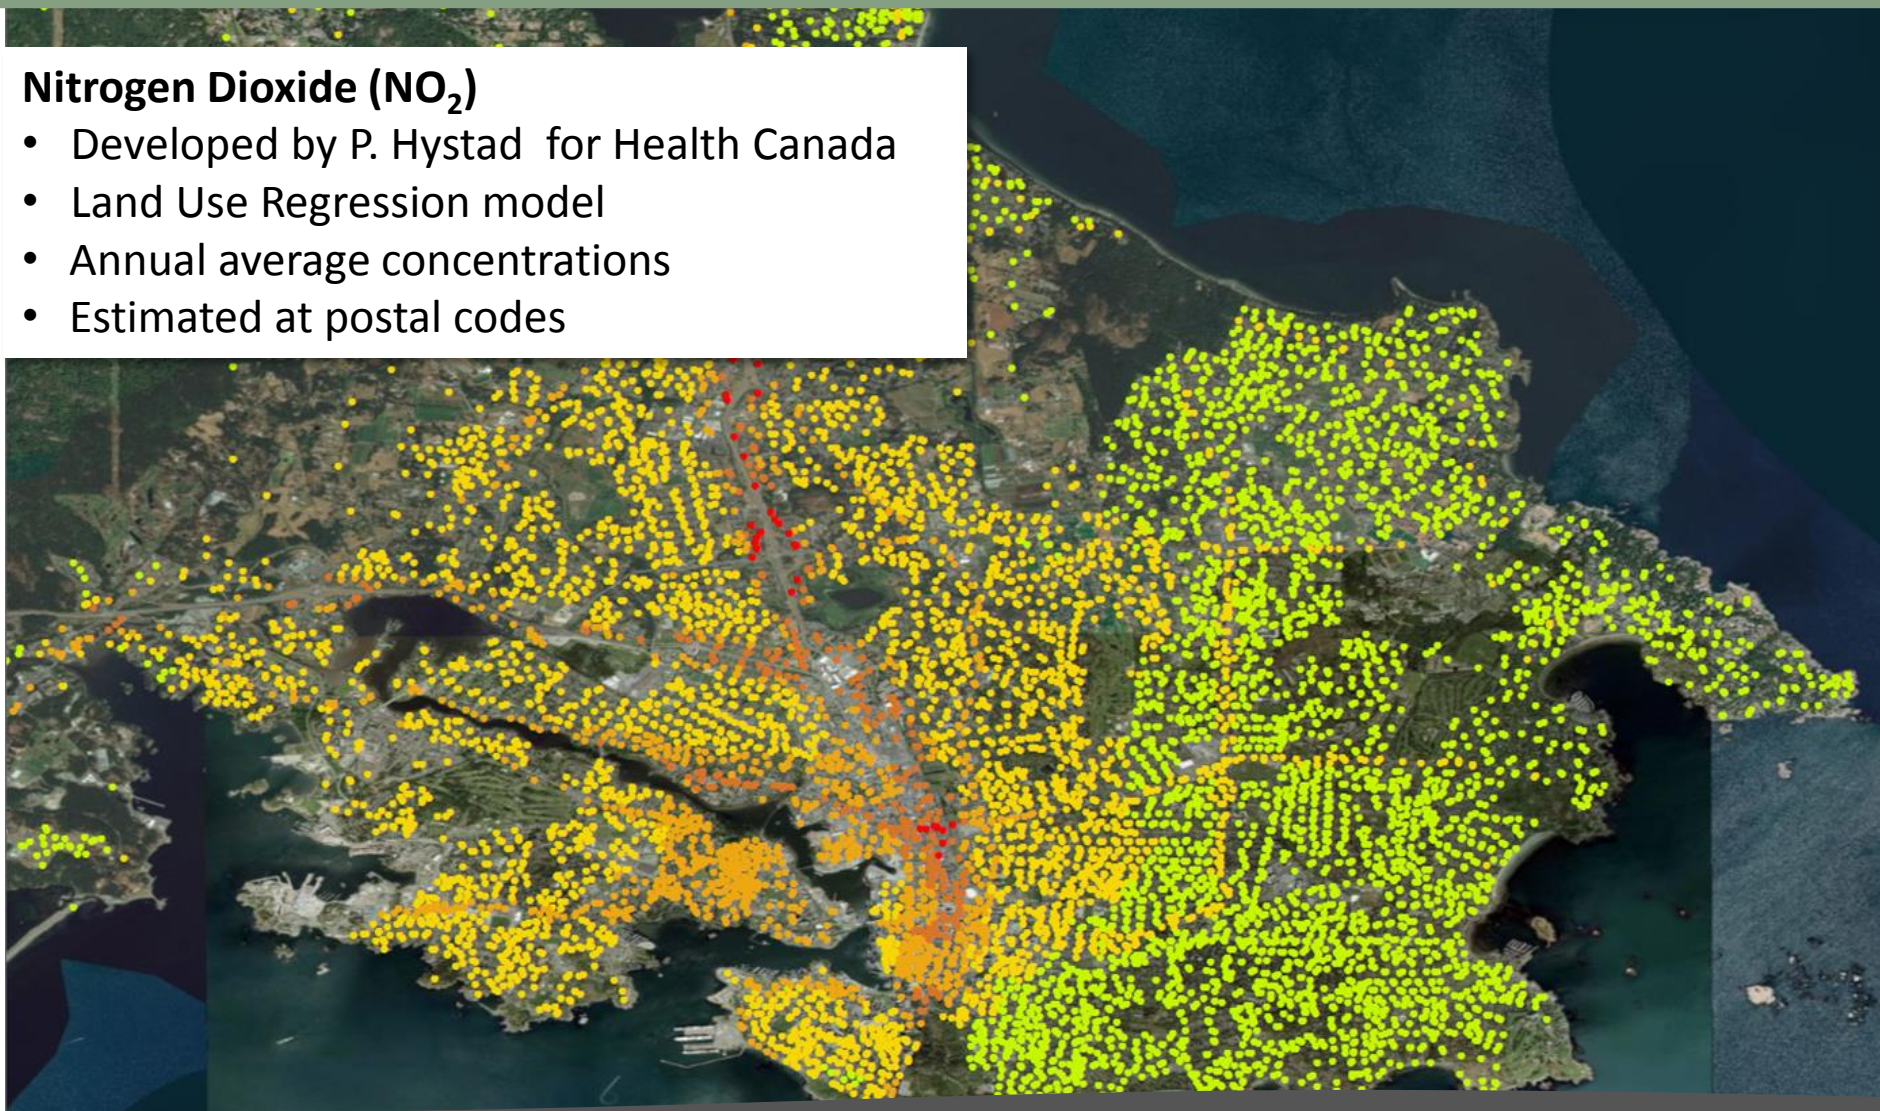

Fine Particulates (PM_{2.5})

- Developed by A. van Donkelaar and R. Martin et. al. at Dalhousie University from NASA satellite imagery
- Annual average concentrations
- 1 km resolution

Nitrogen Dioxide (NO₂)

- Developed by P. Hystad for Health Canada
- Land Use Regression model
- Annual average concentrations
- Estimated at postal codes

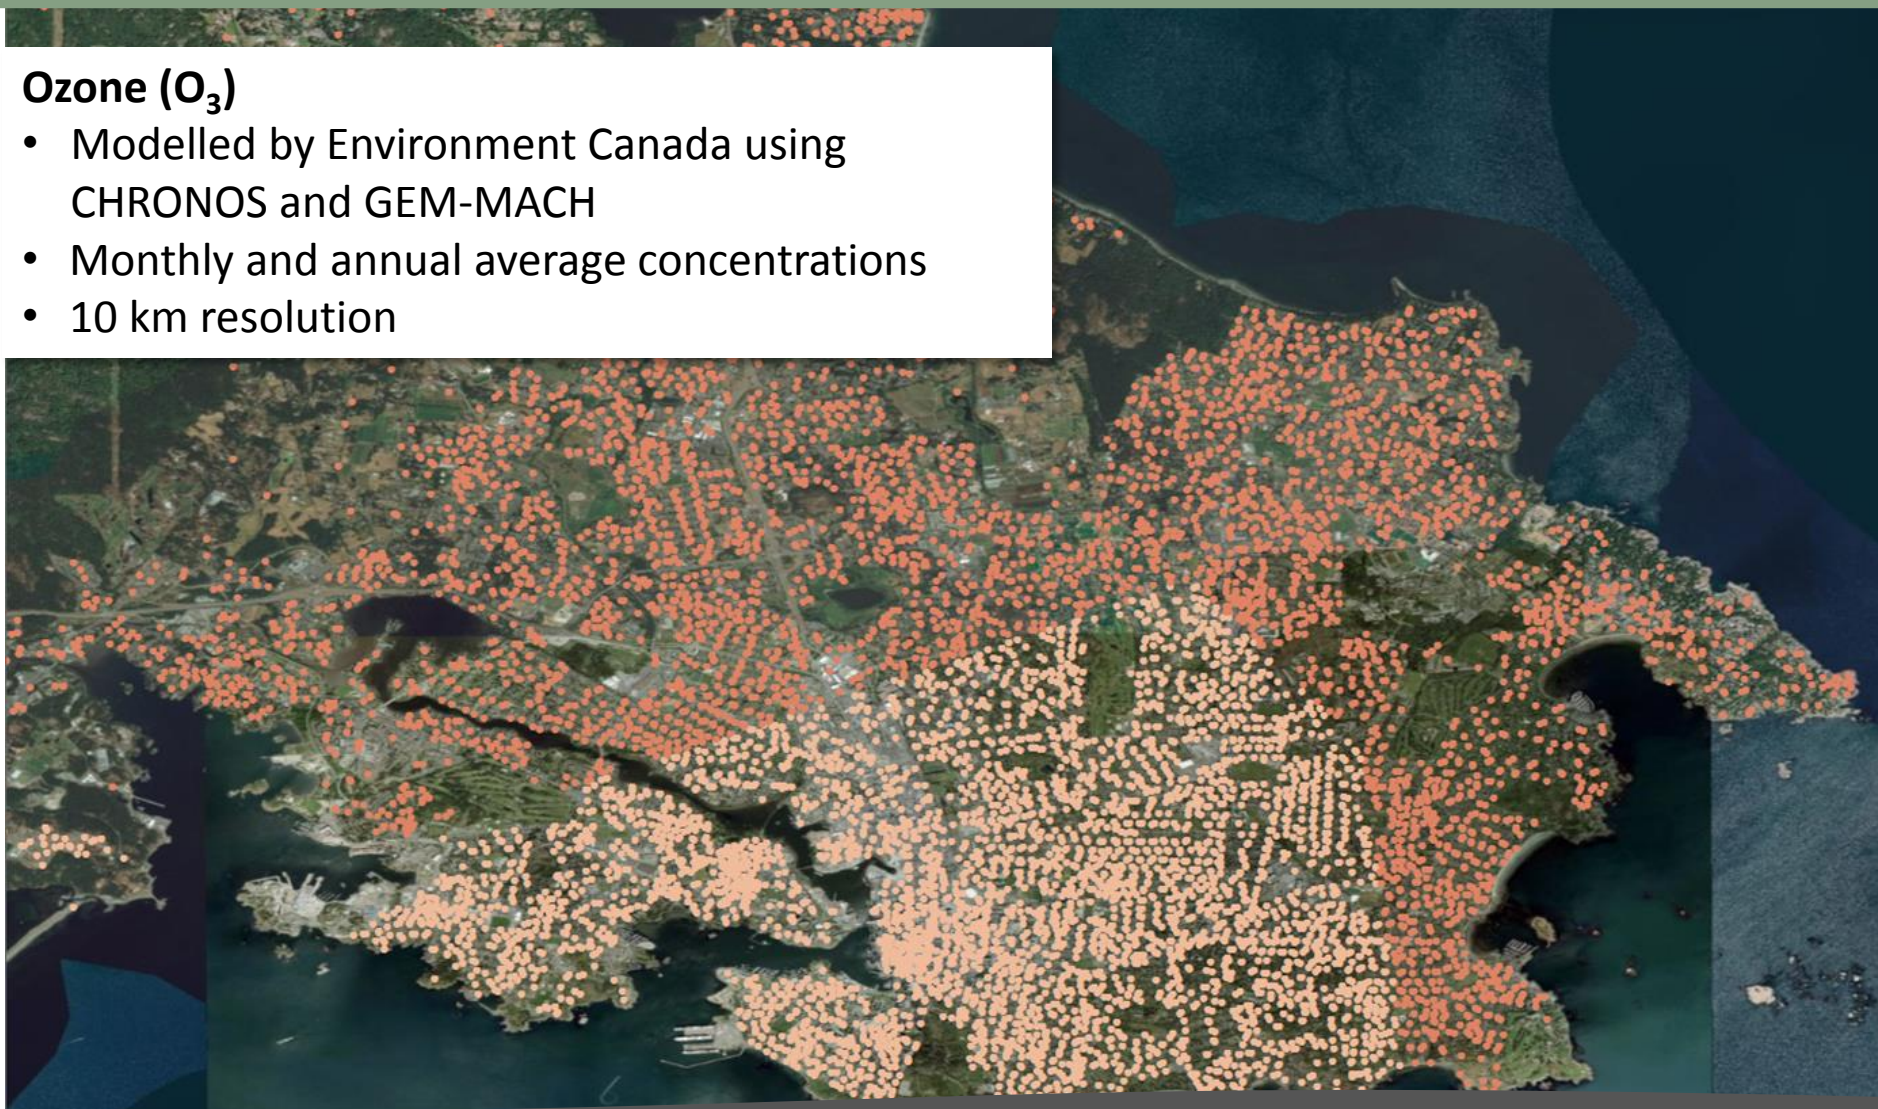

Sulphur Dioxide (SO₂)

- Modelled by Environment Canada using OMI satellite data
- Annual average concentrations
- 30 km resolution

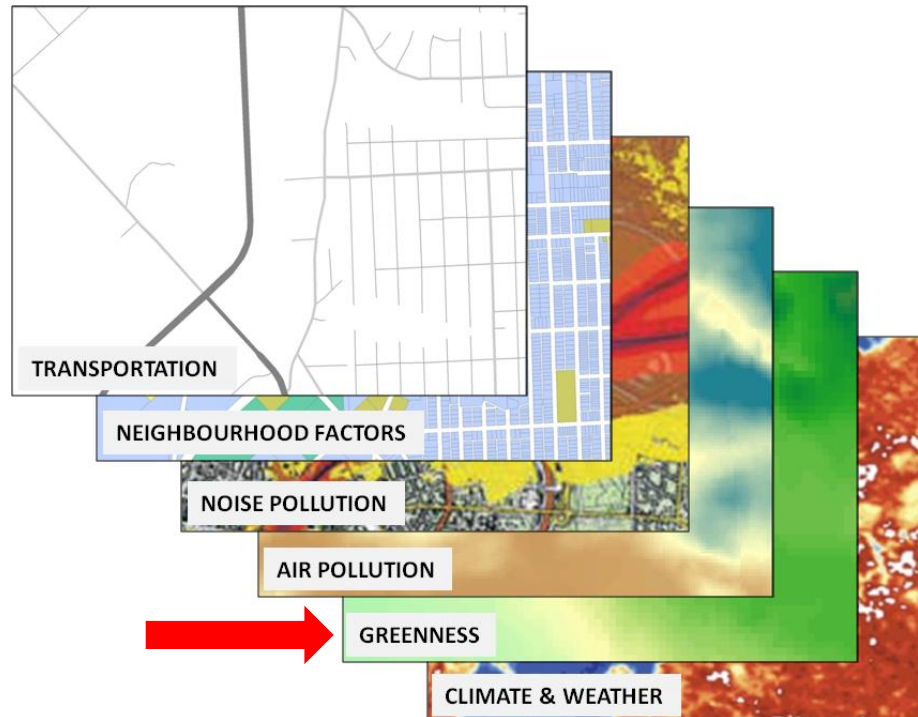

Ozone (O_3)

- Modelled by Environment Canada using CHRONOS and GEM-MACH
- Monthly and annual average concentrations
- 10 km resolution

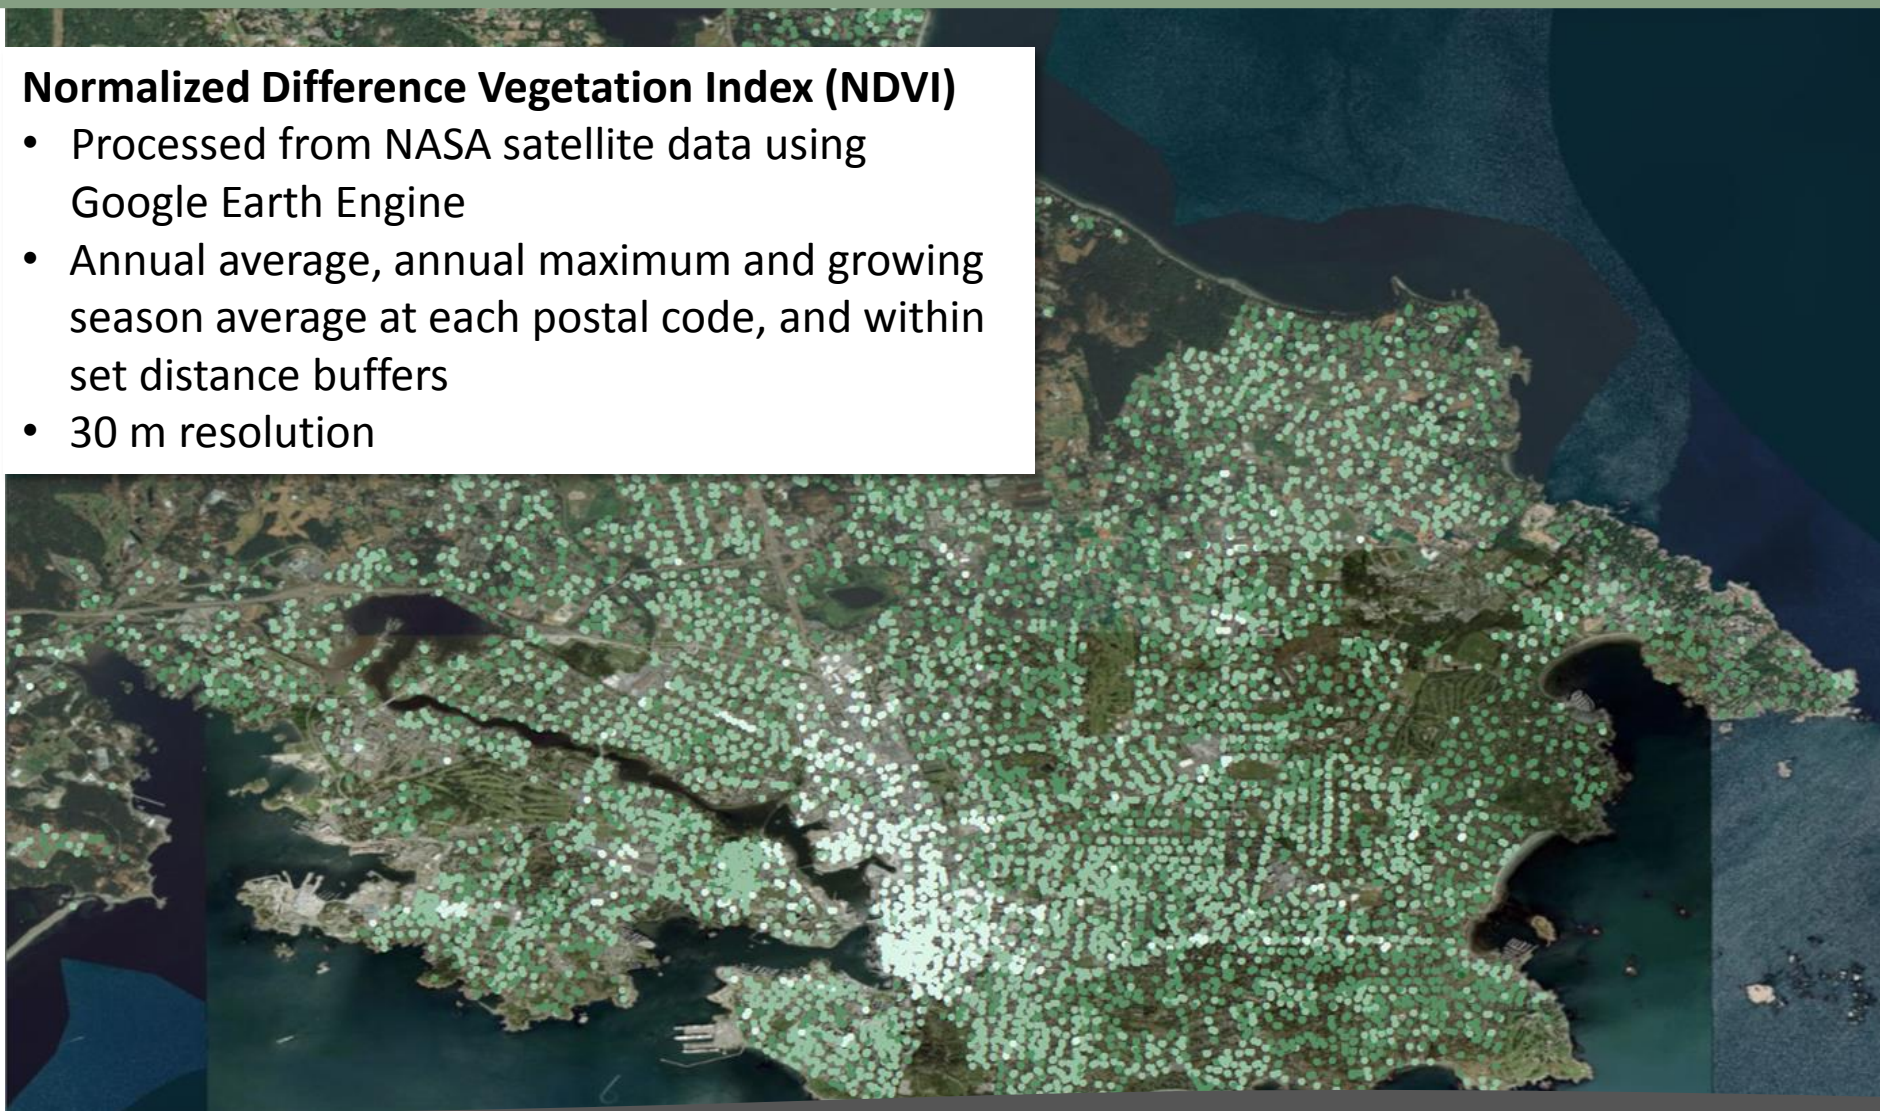

Greenness

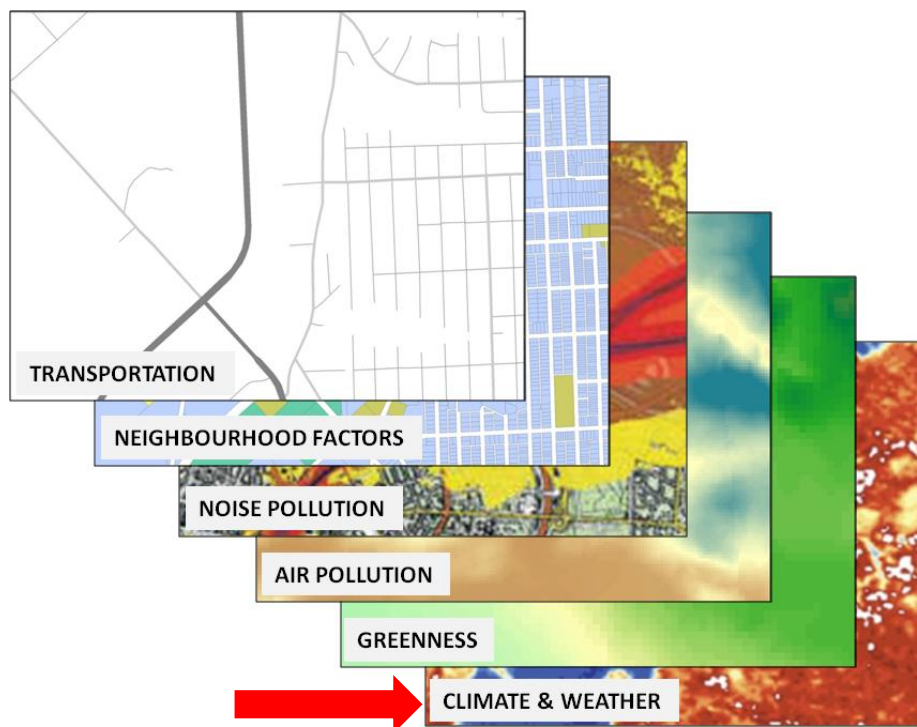

Normalized Difference Vegetation Index (NDVI)

- Processed from NASA satellite data using Google Earth Engine
- Annual average, annual maximum and growing season average at each postal code, and within set distance buffers
- 30 m resolution

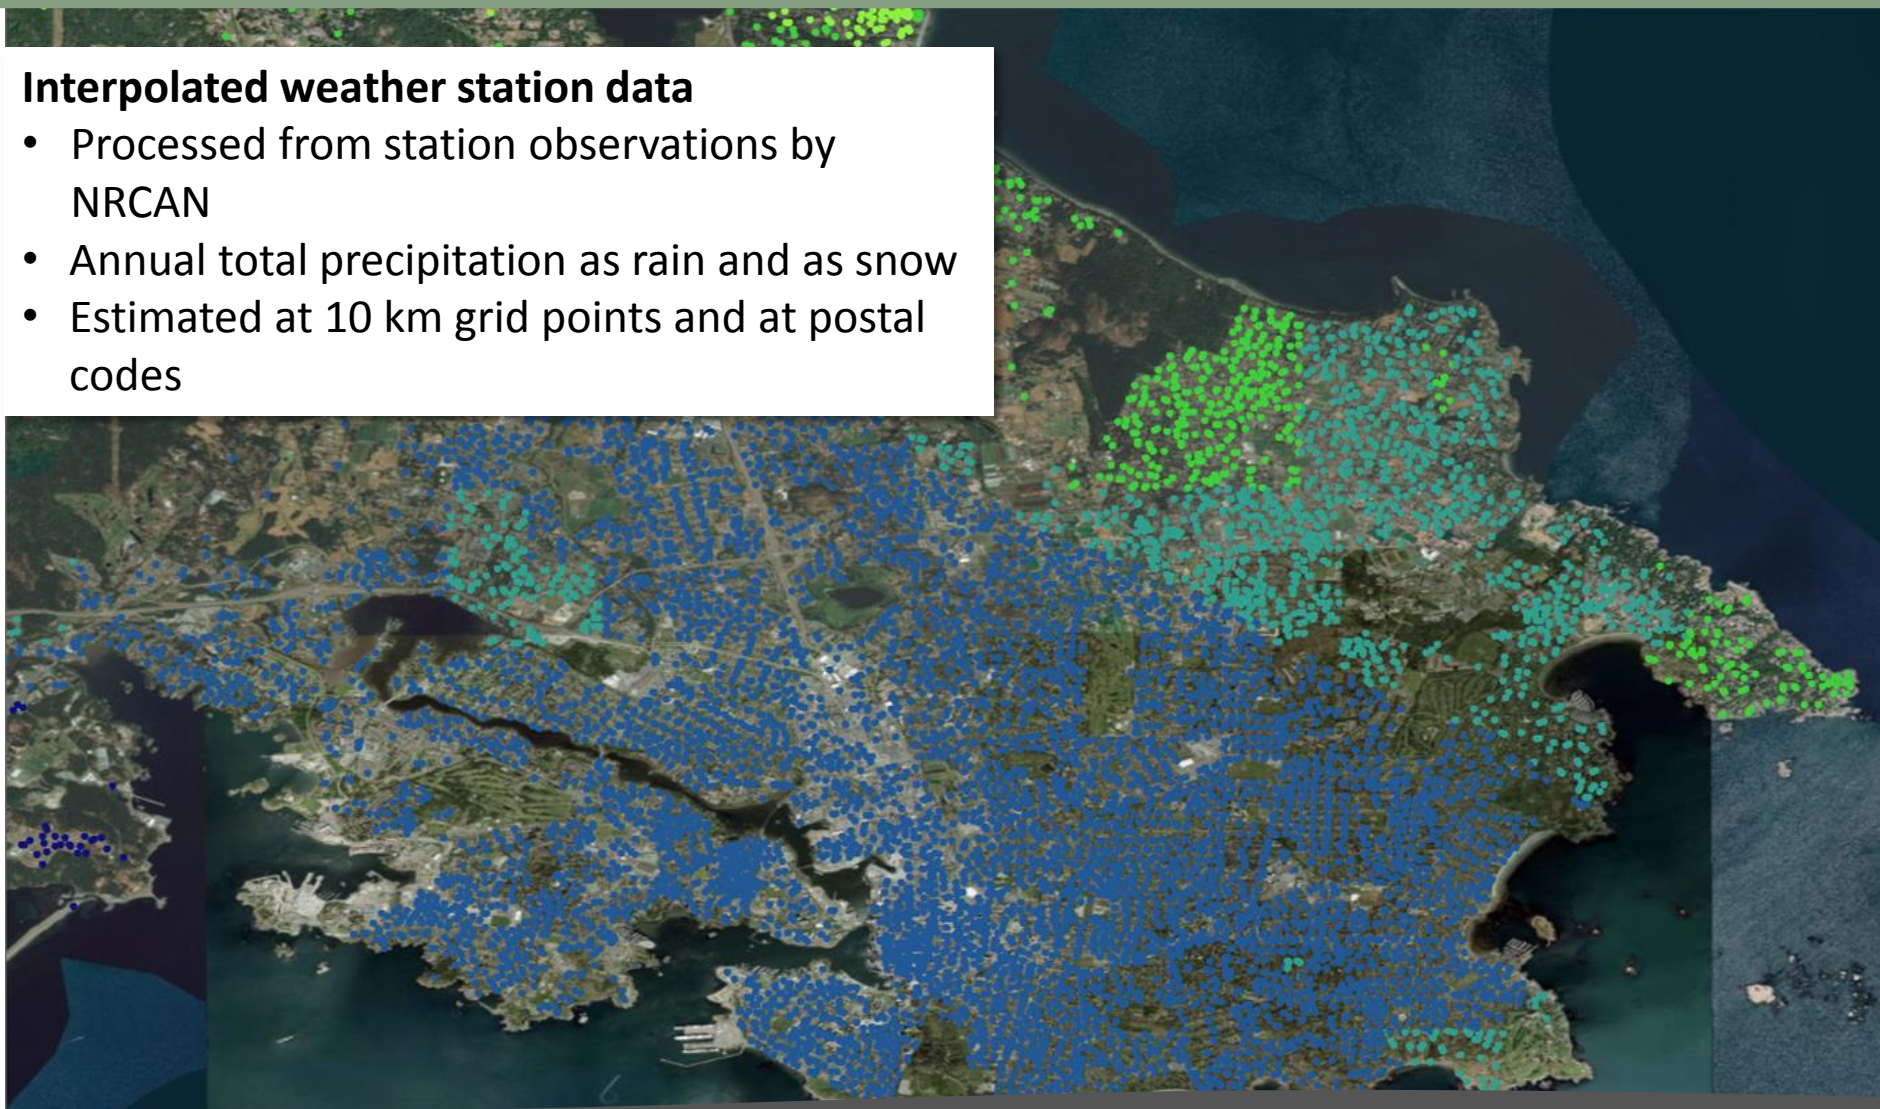

Weather and Climate

Interpolated weather station data

- Processed from station observations by NRCAN
- Annual total precipitation as rain and as snow
- Estimated at 10 km grid points and at postal codes

Pre-linked data: Exposure by urban/rural classification

Variable	Urban Core (n= 37 855)	Urban fringe/Rural (n = 13 483)
"Walkability" (mean)	0.25	-1.95
PM _{2.5} (mean)	6.69	4.44
NO ₂ (mean)	6.92	4.73
SO ₂ (mean)	0.28	0.24
O ₃ (mean)	26.15	29.91
Greenness (mean)	0.51	0.62

Pre-linked data: Quintile distribution of CLSA participants

	Variable	Q1	Q2	Q3	Q4	Q5	n
	Material deprivation	15 113 (30.8%)	11 496 (23.4%)	9 032 (18.4%)	7 483 (15.2%)	6 023 (12.3%)	49 147
	Social deprivation	8 492 (17.3%)	9 755 (19.8%)	9 791 (19.9%)	10 427 (21.2%)	10 682 (21.7%)	49 147
	“Walkability”	15 722 (30.7%)	16 780 (32.8%)	13 353 (26.1%)	3 731 (7.3%)	1 624 (3.2%)	51 210
	PM _{2.5}	4 391 (8.8%)	2 531 (5.1%)	1 806 (3.6%)	7 423 (14.9%)	33 641 (67.6%)	49 792
	NO ₂	19 844 (38.8%)	9 331 (18.2%)	7 192 (14.1%)	6 929 (13.5%)	7 871 (15.4%)	51 167
	SO ₂	10 940 (23.6%)	11 569 (24.9%)	10 108 (21.8%)	8 029 (17.3%)	5 749 (12.4%)	46 395
	O ₃	25 751 (50.2%)	8 689 (17.0%)	9 629 (18.8%)	4 001 (7.8%)	3 188 (6.2%)	51 258
	Greenness (year mean)	8 645 (16.9%)	9 224 (18.0%)	10 813 (21.1%)	10 977 (21.4%)	11 536 (22.5%)	51 195

Pre-linked data: Environmental exposure correlations

Some exposures are highly correlated – large cohorts such as CLSA can help disentangle their individual effects

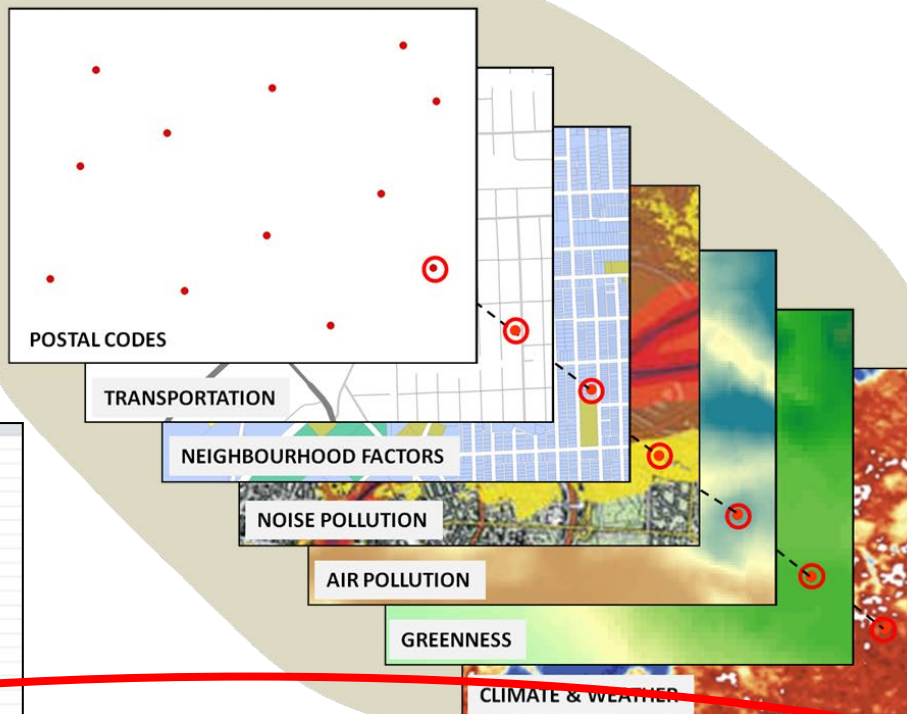

- **Negative correlations** between greenness metrics and NO₂, walkability, PM_{2.5}, nighttime light
- **Positive correlations** between NO₂, PM_{2.5}, walkability and social deprivation

CANUE members represent a wide range of experience and expertise: graduate and post-doctoral students, faculty members from more than 20 Universities, representatives from more than a dozen federal and local government agencies, and key members from public health and urban planning organizations.

Our [members](#) are health research scientists, clinical doctors, experts in geographic information systems and spatial analysis, urban and transportation planners, climate change scientists, health policy experts, environmental epidemiologists, statisticians, and experts in database design and management.

CANUE is increasing the capacity of CLSA to advance research on how *where an individual lives* impacts their 'aging experience' and health

- *Sleep, physical activity, sedentary behavior, built environments, mobility limitations, exercise, environmental determinants of physical activity*
 - all influenced by 'place' and are part of current CLSA (and CANUE) projects
- With CANUE's established platform we have the opportunity to build the capacity to explore place-related questions over the long-run (nationally and internationally)
 - Regular updates of existing metrics and new metrics reflecting latest S&T
- Can we substantively advance the *Exposome* concept?
 - Life-course exposure leads to one's exposome which interacts with one's genome
 - How have lifetime environmental conditions influenced susceptibility?
- Can we learn quickly and influence how our urban, suburban and rural areas evolve?
 - Solution-oriented research
 - Do changes in environment lead to changes in outcomes?
 - Past interventions (e.g., improved transportation; access and coverage)
 - Optimize urban and transportation planning for healthy aging
- Addressing and preparing for climate change

UPCOMING CLSA WEBINARS

“Moving more to breathe better:
Associations between physical activity,
sitting time, and lung function in the
CLSA”

Dr. Shilpa Dogra

November 22, 2018 | 12 p.m. EST

Register: bit.ly/clsawebinars
