Now I am going to ask you to complete some tasks related to memory and concentration. Some of these tasks might seem difficult and some might seem easy, but that's the way it is supposed to be. We don't expect you to get them all right; we are asking everyone to do these tasks.

1.	PMT_INST_COF3
[ALWAYS ASK]	
<p>Present the subject with the envelope containing 3 loonies, 1 five-dollar bill, 1 ten-dollar bill, 1 twenty-dollar bill, a quarter and a nickel.</p> <p>Say to Subject: "As you can see, this envelope contains money" (As you say this, open the envelope and place the different bill denominations and coins on the table, at random, without arranging them in ascending or descending value).</p> <p>Then say: "When this timer goes off (have the oven timer bell go off), I want you to pick up this envelope which will be in front of you and give me a five-dollar bill (select the five dollar bill from the table and give it to yourself). I want you to give yourself a ten-dollar bill" (select the ten dollar bill and give it to subject).</p> <p>Leave the money on the table and repeat instructions once more by saying: "Let me repeat the instructions. When this timer goes off...". As you repeat instructions, ring the timer again and verify that the Subject can hear the timer without difficulty.</p> <p>To verify that the Subject understood the instructions, say: "Please tell me what you are supposed to do." Repeat instructions as needed. Clarify any issues and verify that the Subject knows the event (i.e., oven timer bell going off) and the actions (i.e., take the envelope, open it, and give \$5 to examiner and \$10 to self) that he/she is supposed to perform.</p>	

1a	PMT_ABLE_COF3
[ALWAYS ASK]	
Is the participant able to do the test?

Place the oven timer in close proximity to the Subject in a place where he/she is unable to see the time left before it goes off.		

3	PMT_INSTRUCTIONS2_COF3	
[ASK IF PMT_ABLE_COF3 = YES]		
When the timer goes off, allow a 60-second grace period for the Subject to initiate a response. If Subject has not initiated a response within 60 seconds, initiate provision of hierarchical cues as shown, in the next page.		

PMT_1	PMT_TIM_COF3

<p>INTERVIEWER: WHEN THE TIMER GOES OFF, ALLOW A 60-SECOND GRACE PERIOD FOR THE PARTICIPANT TO INITIATE A RESPONSE. IF THE PARTICIPANT HAS NOT INITIATED A RESPONSE WITHIN 60 SECONDS, INITIATE PROVISION OF THE HIERARCHICAL CUES AS FOLLOWS BY SAYING: You were supposed to do something when the timer went off. Do you know what it was?</p>		
<p>INTERVIEWER NOTE: ALLOW THE BUZZER ON THE TIMER TO RUN FOR <u>AT LEAST 30 SECONDS</u> BEFORE TURNING IT OFF.</p>

SOME_IDEA_MONEY_ONLY	04	Has some idea (i.e., based on verbal comments or actions) that the response had to do with the money

INTERVIEWER: INTENTION TO PERFORM:	
GRABS_ENVELOPE	(score=3): Grabs envelope when the oven timer bell goes off.
GIVE_INDICATION_VERBALLY	(score=2): Does not grab envelope but gives indication verbally that s/he needs to do something in response to signal (e.g., “I know I’m supposed to do something, but I can’t remember what it is.”).
NON_VERBAL_RESPONSE	(score=1): Provide a non-specific, non-verbal response to signal (e.g., looks around the room, looks at area where the bell rang, startle responses).
NO_RESPONSES	(score=0): Provides no responses to signal.

PMT_5	PMT_ACR_COF3
[ASK IF PMT_MONEY_COF3 ≠ REFUSED]	
INTERVIEWER: ACCURACY OF RESPONSE:	
CORRECTLY_GIVE_5_AND_10	(score=3): Subject correctly gives the examiner the \$5 dollar bill and gives to self the \$10 dollar bill.
CORRECTLY_SELECTS_BUT_NOT_USED_CORRECTLY	(score=2): Subject correctly selects the \$5 and \$10 dollar bills but does not use them correctly (e.g., gives the examiner the \$10 dollar bill and gives to self the \$5 dollar bill).
SELECTS_5_OR_10_GIVES_TO_SELF_OR_EXAMINER	(score=1): Subject selects the \$5 or \$10 dollar bill and gives it to self or examiner. Assign a score of 1 regardless of which one (i.e., the \$5 or \$10) is given to whom (i.e., self or examiner). Giving to examiner or self other denominations (e.g., \$20 bill) or coins results in score=1 if Subject selects either the \$5 or \$10 dollar bill.
NONE_OF_THE_ABOVE	(score=0): None of the above. Some alternatives are: a) Subject does not select the \$5- or \$10-dollar bill but rather selects other denominations or only selects coins. b) Subject selects \$5 or \$10 dollar bill but does not take any of these for self nor does he/she give it to the examiner. c) Subject does not select any money from the envelope (e.g., gives envelope to examiner with all the money in it).

PMT_6	PMT_REM_COF3

INTERVIEWER: NEED OF REMINDERS:		
NO_REMINDER_NEEDED		(score=3): No reminder is needed.

PMT_REMTWO_SP1_COF3		Specify Reminder_1
PMT_REMTWO_SP2_COF3		Specify Reminder_2
NEEDS_ALL_REMINDERS		(score=0): Needs all three reminders. Assign a score of 0 regardless of whether the response to the third reminder was accurate or not.

Choice Reaction Time Test (CRT) – (Regular/Reduced visits)

Social Networks (SN) – (Regular/atHome/byPhone/Reduced visits)

Overview	<p>Social functioning emphasizes issues of sustained engagement with life, the essential characteristic being the interaction between the individual and society. Exchanges between individuals and society all contribute to social functioning; these exchanges are facilitated through family and other social ties.</p> <p>The CLSA includes measures that cover both structural (e.g., social network size, frequency of contact) and functional (perception of support received) domains relevant to social support. The CLSA Questionnaire includes 15 items pertaining to the respondent’s social network; these items include marital/partner status, living arrangements, family composition, social ties and social contacts.</p>

Social Support – Availability (SSA) – (Regular/atHome/byPhone/Reduced visits)

Overview	<p>The ability of people to call on support when they need it is important in understanding their overall health. For example, having somebody to take you to a medical appointment may mean that you are more likely to get the care you need.</p> <p>This module consists of a series of detailed questions about the availability of social support. The answers will be combined to determine how likely it is that the respondent has access to social support.</p> <p>The results of this module will be valuable in identifying which groups are most lacking in social support.</p>

Generalized Anxiety Disorder (GAD) – (Regular/atHome/byPhone/Reduced visits)

A Brief Measure for Assessing Generalized Anxiety Disorder The GAD-7.

Spitzer RL, Kroenke K, Williams JB, Löwe B. Arch Intern Med. 2006 May 22;166(10):1092-7

Overview	<p>The questions in this module come from the GAD-7, which measures how much the person has been bothered by feeling nervous, anxious, or on edge, not being able to stop or control worrying, worrying too much about different things, having trouble relaxing, being so restless that it is hard to sit still, becoming easily annoyed or irritable, and feeling afraid as if something might happen.</p> <p>Importance of module: Generalized anxiety disorder interferes with everyday functioning. This includes work or school, social activities, and relationships with other people. It also increases the risk of drug abuse and eating disorders.</p>

The SCREEN™ assessment tool is owned by Dr. Heather Keller. Use of the SCREEN™ assessment tool was made under license from the University of Guelph. This module is a modification of the SCREEN© instrument (Abbreviated version of SCREEN II©) developed by Dr. Heather Keller (University of Guelph, Ontario, Canada).

Overview	<p>This module is an adapted version of screening tool called Seniors in the Community: Risk Evaluation for Eating and Nutrition (SCREEN II). Questions look at weight change, eating habits, difficulty eating, fruit, vegetable and fluid consumption, and meal satisfaction. In addition, questions ask about frequency of fast-food consumption, coffee and tea consumption, and food security.</p> <p>Importance of module: The data from this module can be used to estimate the prevalence of nutritional risk. Nutritional risk is an indicator of frailty and is associated with lower resistance to infection, increased risk of falls, increased use of healthcare services, and increased dependency.</p>

Time-Based Prospective Memory Test (TMT) – (Regular/atHome visits)

Overview	INTERVIEWER NOTES: REMINDER TO USE THE SCRIPT PRECISELY AS PROVIDED AND TO ADHERE TO THE PRESCRIBED TIME ALLOWANCES IN THE FOLLOWING COGNITION MODULES.
-----------------	----------------------------------------------------------------------------------------------------------------------------------------------------------------

Now I am going to ask you to complete one more task related to memory and concentration.

1.	TMT_INST_COF3
INSTRUCTIONS: Trial 1	
[ALWAYS ASK]	
Present the subject with the large clock with the hands pointed to 8:00. Point to clock and say to Subject: "According to this clock, what time is it?" If the subject responds correctly, answer the question "Did the subject pass all of the practice trials?" and continue with instructions on step #2. If the Subject responds incorrectly, say: "The time here is 8:00." Set the time to 3:00, 12:15, 12:30, and 8:00. Ask the Subject after each setting: "What time is it?" If the subject fails any of these practice trials, discontinue the test.	

TMT_P1	TMT_PASS_COF3
[ALWAYS ASK]	
Did the subject pass all of the practice trials?

NO	2 No

REFUSED	9 [DO NOT READ] Refused
[IF TMT_PASS_COF3 ≠ YES SKIP TO TMT_END]

2. Have the envelope with cards numbered 28, 14, 17, 13, 11 ready and say to Subject: **"When this clock reaches 8:15, I want you to interrupt whatever we are doing and ask me to give you this envelope** (show envelope to Subject). **I want you to then open the envelope** (open envelope to show the Subject how to open it, take out the cards with the numbers facing the subject and place them on the desk, at random, without arranging them in ascending or descending value) **and give me the card with the number 17.**" (Select the card with number 17 and take it as though giving it to self.) Re-order the cards and put them back in the envelope. Let the Subject know that you are going to repeat the instructions once more by saying: **"Let me repeat the instructions. When this clock reaches 8:15..."** On the second repetition of the instructions, present cards in a different order as the one used on the first presentation.

3. The card with the # 17 cannot be the first card pulled out of the envelope.

4. To verify that Subject understood the instructions say: **"Please tell me what you are supposed to do."** If Subject states the instructions correctly, say: **"Good."** If Subject makes a mistake, repeat instructions to make sure that he/she knows the target time (i.e., 8:15), the request that he/she has to make (i.e., give me the envelope), and the action (i.e., select card with number 17 and give it to examiner).

Chronic Conditions (CCC)

Overview	<p>This module deals with long-term health conditions, diagnosed by a health professional, that have lasted or are expected to last at least 6 months.</p> <p>Answers to the questions in this module can be used to estimate the number of people in Canada suffering from chronic conditions such as diabetes, heart disease and Parkinson’s disease.</p> <p>By combining answers from this module with information from other modules, researchers can look at the relationship between chronic conditions and other characteristics, such as use of health care services or level of physical activity.</p>

Epilepsy (EPI) – (Regular/atHome/byPhone/Reduced visits)

This module uses the Canadian Longitudinal Study on Aging Epilepsy Algorithm (CLSA-EA) questionnaire. The CLSA-EA questionnaire was developed and validated by Dr. Mark Keezer and his research team.

I would like to ask a few questions about epilepsy. Although you may not have this condition, or any of the symptoms related to it, please answer the questions to help us estimate the percentage of people in the study who do or do not have this condition or symptoms.

For each of the following questions, please answer “yes”, “no”, or “possible”.

Arteries or veins from elsewhere in the patient's body are grafted to the coronary arteries to bypass narrowed arteries and improve the blood supply to the heart muscle.</p> <p><i>Angioplasty (also called balloon angioplasty or Percutaneous Transluminal Coronary Angioplasty):</i> an empty and collapsed balloon on a guide wire, known as a balloon catheter, is passed into the narrowed locations of arteries and inflated. The balloon crushes the fatty deposits, opening up the blood vessel for improved flow, and the balloon is then deflated and withdrawn.</p> <p><i>Stent:</i> a tube placed in the coronary arteries that supply the heart, to keep the arteries open in the treatment of coronary heart disease. Osteoarthritis of the Hand (OSA) – (Regular/atHome/byPhone/Reduced visits)

NOTE: Osteoarthritis: a joint disorder due to aging and wear and tear on a joint. The most common symptoms are pain and stiffness in the joints. The pain is often worse after exercise and when weight or pressure is put on the joint. Joint swelling is typically seen in the joints closest to the fingernails (see OSA_3 diagram below).

Rheumatoid arthritis (not the topic of this question) is a long-term disease that leads to inflammation of the joints and surrounding tissues. This condition often begins slowly, usually with only minor joint pain, stiffness, and fatigue. Joint symptoms may include morning stiffness, or warm, tender, and stiff feelings when not used for an hour. Joint pain is often felt on the same joint on both sides of the body. Over time, joints may lose their range of motion and may become deformed. Joint swelling is typically seen in the joints closest to the base of the fingers (see OSA_3 diagram below).

Depression (DEP) – (Regular/atHome/byPhone/Reduced visits)

The Canadian Longitudinal Study on Aging received permission from Dr. Elena Andresen (instrument developer) for the use of the Center for Epidemiological Studies Short Depression Scale (CES-D-10).

Overview	<p>Many people feel depressed at one time or another, to varying degrees. However, long lasting depression is a serious mental and physical health concern.</p> <p>This module consists of a series of detailed questions about depression. The answers will be combined to determine how likely it is that the respondent is depressed.</p> <p>This module gathers information on the length, timing and consequences of depressive episodes.</p>

Not everyone who has Parkinsonism has Parkinson's disease.</p> <p>Parkinson's disease is a degenerative disorder of the central nervous system. Early in the course of the disease, the most obvious symptoms are movement-related; these include shaking, rigidity, slowness of movement and difficulty with walking and gait. Later, cognitive and behavioural problems may arise, with dementia commonly occurring in the advanced stages of the disease. Other symptoms include sensory, sleep and emotional problems.</p>

Oral Health (ORH) – (Regular/atHome/byPhone/Reduced visits)

Overview	<p>In this module, participants are asked to describe the oral health (i.e., health of their mouth), the types of oral health problems they experience (if any), and their tooth brushing and flossing habits. Participants are also asked to report how often they avoid eating particular foods.</p> <p>Importance of module: To help examine the association between oral health and diseases such as diabetes or respiratory and cardiovascular diseases. The questions also provide information on risk factors for oral health problems. These factors include poor nutrition and socio-economic status. As well, data from this module could help identify groups with the greatest need for improved dental health services.</p>

Sleep (SLE) – (Regular/atHome/byPhone/Reduced visits)

Overview	Questions about sleep allow the CLSA to examine the relation between sleep and health. Evidence has shown that factors such as duration of sleep and movement during sleep are linked to mortality and health concerns such as heart disease.

PROGRAMMING NOTE: THIS MODULE IS ADMINISTERED ONLY IF AGE IS ≥ 65 YEARS

Overview	<p>Now we're trying to learn how older adults feel about their well-being and safety. This module is talking about mistreatment or abuse of older adults. This information will be used to develop policies to help prevent the mistreatment or abuse of older adults in Canada. I want to remind you again that your participation in this study is fully voluntary. You can refuse to answer any questions during the interview or stop at any time if the questions make you uncomfortable. Again, all information you provide will be kept confidential and used only for research purposes. The following questions will ask you about if someone in your life right now is ever hurting you or stopping you from being able to take your medications or access your money. If you do not want to answer any questions, or provide any of the details we ask for, you do not have to. Just let me know and we will skip the question. If you need me to stop at any point, let me know.</p>

Intimate Partner Violence (IPV) – (Regular)

Ford-Gilboe M, Wathen CN, Varcoe C, et al. Development of a brief measure of intimate partner violence experiences: the Composite Abuse Scale (Revised)—Short Form (CASR-SF). BMJ Open 2016;6:e012824.

Overview	<p>The questions in this module come from the Composite Abuse Scale (Revised) - Short Form (CAS_R-SF), a brief self-report measure of IPV that was adapted from the original longer Composite Abuse Scale (CAS). The CAS_R-SF is used to assess lifetime exposure to IPV and severity of IPV experiences in the previous 12 months. IPV, or what is sometimes referred to as domestic violence, is defined as a pattern of behaviour from an intimate partner or ex-partner that causes or has the potential to cause physical, psychological or sexual harm, including physical aggression, sexual violence or coercion, psychological abuse, and controlling behaviours, including financial control. The CAS_R-SF covers a broad range of acts consistent with these types of abuse.</p> <p>Importance of module: IPV is associated with a wide range of physical and mental health problems, including injuries, chronic pain, gynecologic and gastrointestinal problems, depression, anxiety, substance abuse and suicide attempts, among others, and with increased use of health services.</p>

Participant Debriefing Protocol (Post-Interview)

1. At the end of the module, ask the participant:

How was it for you to answer these questions?
2. Acknowledge that talking about/answering questions about these experiences may produce emotional distress:

“People sometimes have strong emotional reactions in the first few days after they have talked about what they have experienced.”
3. Reinforce that a stress reaction is completely normal. It does not imply that the participant is crazy or weak.
4. Review the signs of stress reaction and things that may be helpful in dealing with a stress reaction should it occur.

Physical	Emotional	Cognitive	Behavioural
nausea	fear	confusion	withdrawal
vomiting	anxiety	nightmares	restlessness
dizziness	guilt	hyper-vigilance	difficulty sleeping
weakness	panic	disorientation	increased sleep
sweating	sadness	difficulty concentrating	increased appetite
difficulty breathing	irritability	forgetfulness	loss of appetite
heart palpitations	anger	intrusive images	activity level changes
chest pain	loss of control	suspiciousness	Increased drug or alcohol use
feeling like you have experienced the abuse again			

5. As necessary, provide information or help connect the participant to community services or resources.
